Water conservation awareness drive at APS Ordnance Road (SMME)

As clean and drinkable is becoming scarce in Pakistan, it is of utmost importance that the general public be made aware of the water crisis and be educated on preserving water. We chose APS Ordnance as our target school. The highlights of our lectures we conducted on water conservation are as followed:

1. Introduction with the much furor about the Diamer-Bhasha and Kalabagh Dam
2. Inadequate water management policies
3. Pakistan's place amongst the most water insecure countries of the world
4. The bleak future if nothing is done
5. Example of Johannesburg
6. The contents of the chart
7. Their role in water preservation

Each session lasted about 20-25 minutes. The students were rowdy at first but eventually became receptive of what we had to say. Other than the classes mentioned above, we also set up a poster in the cafeteria, where we conversed with a massive crowd during recess. The same activity was performed in the playground.
